## WMSC (Water Management and Sediment Control) Regulations

The purpose of the Water Management Sediment Control regulations is to establish management and conservation practices which will eliminate or abate soil erosion and degradation of waters of the State from sediment caused by non-farm earth disturbing activities. These regulations further intend, but are not limited to accomplish the following practices.

One practice is to eliminate or minimize downstream flooding, erosion, and sedimentation damages caused by development and other earth disturbing activities. Another practice is to eliminate or reduce damage to watercourses which may be caused by increases in the volume of the runoff entering the streams or by the sediment and pollutants contained in the stormwater runoff. Establish a basis for the design for stormwater management system in order to protect the current and future rights and options of both the dominant and sub-servient property owners and help assure the long-term adequacy of the stormwater management systems that will be required. Encourage innovative design that will enhance the control of erosion and sediment in a manner consistent with the intent of the regulation. Provide for innovative design of the controlled release of stormwater from the site, in lieu of those requirements resulting from a strict interpretation of these regulations so long as the system meets the allowable discharge rates, or an equivalency is met.

The WMAC Regulations are separates earth disturbing activities into four (4) types of site development.

1. Site development for subdivisions, commercial developments, and industrial developments.
2. Site development for single commercial or industrial buildings, including additions and accessory buildings.
3. Construction of residential homes that are located in approved subdivisions and residential homes on single lots of any size, including additions and accessory buildings.
4. Cut, fill, or grading on existing parcel(s) or lot(s)

The WMSC Regulations will be administered by the Milford Building Department. The City Engineer shall be the administrator and shall enforce these regulations and issue such notices and orders as may be necessary. The Board of Zoning Appeals will be managing the appeals process in accordance with section 1131.01 of the Milford Zoning Ordinance.
